

ATTACK / BODY

.320 LIPOFIT

Program to treat localized adiposity

Reshape your body, promoting the reduction of localised fat deposits on the belly and hips, and improving the elasticity of skin tissue.

BOOST

AROSHA
AESTHETIC SCIENCE

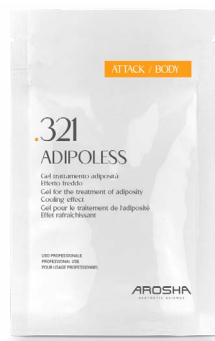

A professional in-cabin treatment made of **4 sessions**, specifically developed to counteract and treat abdomen **localized adiposity**.

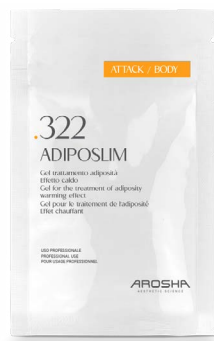

WHAT'S INSIDE THE KIT

Benefits

- Favours the reduction of localized adiposity on abdomen and hips
- Reactivates the cutaneous microcirculation, favouring the slimming effect
- Improves the elasticity of cutaneous tissues, counteracting the relaxation and giving compactness

4 Envelopes - 20ml each
.321 ADIPOLESS
Adipogenesis inhibition

4 Envelopes - 20ml each
.322 ADIPOSIM
Lipolysis Stimulation

4 Envelopes - 125ml each
.323 LIPOSOLVE
Presoaked active matrix
lipolytic action

GEL FOR THE TREATMENT OF ADIPOSITY

ADIPOLESS

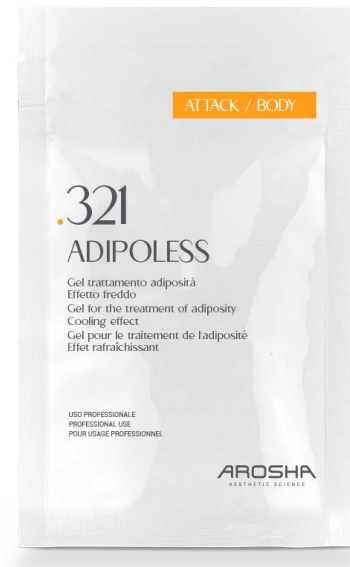

HOT TECHNOLOGY AND FAT BURNING EFFECT (LIPOLYSIS STIMULATION)

Gel for the abdomen with hot effect.

It contains a precious **LIPOLYTIC COMPLEX** (Glaucine + tripeptide 41) that stimulates the **LIPOLYSIS**, favouring the fat burning effect.

Glaucine is a multifunctional molecule that acts on the calcium channels, activating the lipolysis of the adipocytes. Clinical tests demonstrate its capacity of reducing the localized adiposity (-43%) and improve skin elasticity (+20%).

Tripeptide-41 is a lipolytic peptide that converts tryglicerol and glycerol and free fatty acids; clinical tests demonstrate its ability in improving the appearance of fat deposits on the abdomen.

GEL FOR THE TREATMENT OF ADIPOSITY

ADIPOSLIM

HOT TECHNOLOGY AND FAT BURNING EFFECT (LIPOLYSIS STIMULATION)

Gel for the abdomen with hot effect.

It contains a precious **LIPOLYTIC COMPLEX** (Glaucine + tripeptide 41) that stimulates the **LIPOLYSIS**, favouring the fat burning effect.

Glaucine is a multifunctional molecule that acts on the calcium channels, activating the lipolysis of the adipocytes. Clinical tests demonstrate its capacity of reducing the localized adiposity (-43%) and improve skin elasticity (+20%).

Tripeptide-41 is a lipolytic peptide that converts tryglicerol and glycerol and free fatty acids; clinical tests demonstrate its ability in improving the appearance of fat deposits on the abdomen.

Why the two gels must be mixed before the use?

The hot and crio technologies are activated exclusively when **.321 ADIPOLESS** and **.322 ADIPOSIM** are mixed together, with an important synergic effect: the refreshing action of Menthol derivate is enhanced and prolonged by the presence of VBE.

> COMPONENTS

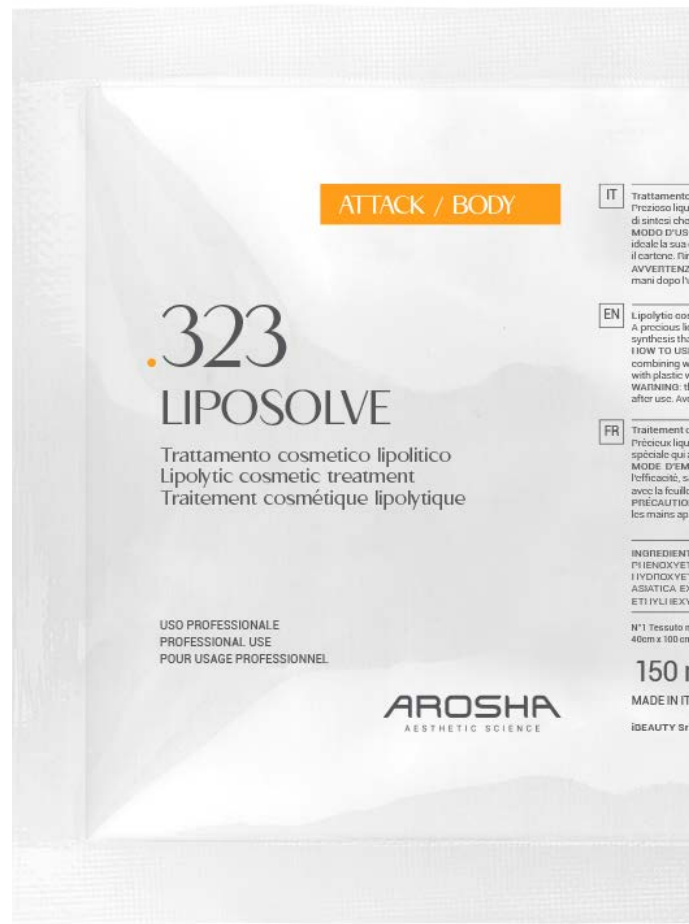

INNOVATIVE FABRIC PRESOAKED IN A CONCENTRATE LIPOLYTIC SOLUTION

LIPOSOLVE

Special biocompatible fabric presoaked in a fat burning solution.

The liquid contains a mix of substances, among them there's a synthetic molecule, completely atoxic, that acts in a quick and focused way on the adipocyte, activating the metabolism and stimulating the mobilisation of the adipose panniculum.

Its particular molecular structure favours the absorption by the fabric and the subsequent transfer to the skin.

Starting from an ancient and established practice, the bandage, Arossha has developed a new fabric, 100% biodegradable and 100% vegetal, with a particular tridimensional structure that captures the functional ingredients inside the liquid and favours the carriage on the skin, optimizing the efficacy of the treatment.

A highly biocompatible matrix with huge hygroscopic properties that absorbs the liquid in the best way and optimizes its carriage to the skin.

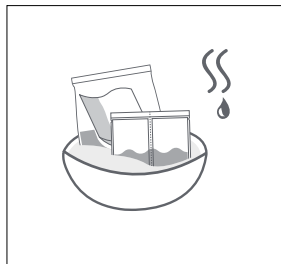

Designed to be used in combination with Waveshape 3.0 that, thanks to the ultrasounds, maximizes the efficacy and the ability to stimulate the microcirculation; it can be used also with the Pressotherapy or alone.

One or two sessions per week are suggested, depending on the stage of the blemish to be treated.

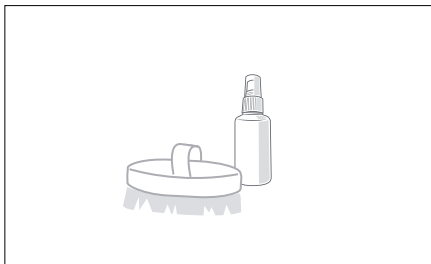

HOW TO USE THE KIT

1.

Leave double (.321 ADIPOLESS + .322 ADIPOSOLIM) and single .323 LIPOSOLVE envelopes in a bowl with hot water for 2 minutes.

2.

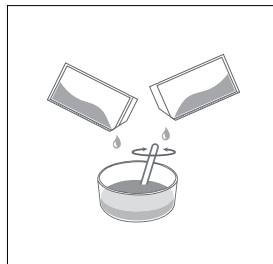

Prepare the client for the treatment by:

- performing a mechanical peeling using the Arosha body brush*
- using .106 GLYCOLIC ACID* spray on the area that will be treated, leaving it in pose for 4 minutes and then clean with a wet towel or tissue.

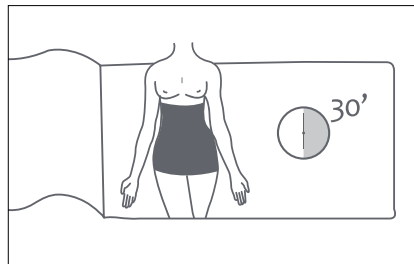

**not included in the kit*

3.

Empty all the contents of both envelopes (.321 ADIPOLESS + .322 ADIPOSOLIM) into a suitable bowl and mix the two products until a homogeneous gel is obtained. Wait for few seconds until hot-cold reaction is activated. Apply the homogeneous gel with a brush on the area to be treated, without any massage.

4/5.

Wrap the entire abdomen with the .323 LIPOSOLVE pre-soaked matrix. Apply any residual gel with a brush on the active matrix.

Wrap the client with the cartene and leave on for 30 minutes. Finish the treatment with a gentle massage using .325 LIPOLYTIC PLUS*.
